Optional:	S- class Hepa filter	S- class Hepa filter

## The ease of working

The Intercare Professional uprights are the lightest to operate with only 860 grams of weight on the handle, due to a patented weight distribution system.

## No tools required

Nothing can be easier, both cleaning and replacing the roller brush can be done without any tools.

The accessories extension hose 1-4 with handle, telescopic wand, crevice tool, upholstery tool, replacement bag are all positioned on the reverse of the machine.

## Electronic protection

The electric circuit permits to adjust the height of the roller brush and allows for a gentle start to the motor and keeps it at a constant speed. The motor stops immediately in case of any blockage thus avoiding damage to the drive belt or any moving parts.

## Patented Dry Cleaning System (DCS)

With a simple converter, a pre-spray and cleaning powder, the Intercare Blue line 380E and 450E can be used for dry-cleaning and refreshing of carpets. Please ask for a demonstration.
